Permabond LH056 is Included in the FBC™ System Compatible Program*

SOMERSET, NJ – Permabond® Engineering Adhesives announces that its pipe sealant LH056 meets the necessary standards and is included in the FBC™ System Compatible Program. The program tests for chemical compatibility with FlowGuard Gold®, BlazeMaster® and Corzan® CPVC piping systems. Permabond LH056 is a pipe sealant designed for use in sealing metal pipes in sprinkler systems which may also contain CPVC piping. Permabond LH056 prevents leaks even on pipes that are not completely seated. Permabond LH056 forms an instant seal and once fully cured the seal will generally surpass the burst rating of the pipe.

Permabond Pipe Sealants use anaerobic technology to prevent leaks in sprinkler systems. Used in fabrication and installation, Permabond Pipe Sealants replace pipe dope and sealing tapes with a complete and reliable seal even if pipes are not completely seated. They prevent corrosion and lock against vibration loosening. They do not remain a paste, like pipe dope, but cure to a solid plastic seal. Cure is initiated by the presence of metal and the absence of air.

About Permabond - - Permabond develops and manufactures engineering adhesives and sealants for assembly, manufacturing, repair, and maintenance. Permabond offers custom formulating for unique requirements. Products are sold worldwide through authorized distributors. FBC™ System Compatible Program was previously known as FGG/BM/CZ™ System Compatible Program

The FBC™ System Compatible Program tests and monitors ancillary products to help determine whether a product is chemically compatible with Lubrizol's FlowGuard Gold®, BlazeMaster®, and Corzan® CPVC piping systems. Other manufacturers and/or brands of CPVC piping have not been tested as part of the FBC™ System Compatible Program. The FBC™ System Compatible program is, therefore, only applicable to the chemical compatibility of ancillary products with the brands of FlowGuard Gold, BlazeMaster, and Corzan CPVC piping systems. This is because every brand of CPVC piping is made up of unique compounds, some of which may contain resins with different molecular weights and varying chlorine content. These characteristics directly impact the performance of the resulting product. Similarly, various CPVC products contain different performance additives. This too affects the performance characteristics of the ancillary product. For these reasons, Lubrizol bears no liability for any failures occurring as a result of using products in the FBC System Compatible Program with CPVC products other than FlowGuard Gold, BlazeMaster, and Corzan.
